

## CTC - Introduction to Trades

***The Introduction to Trades Program*** is a school district program located on the NDSS Campus. This program brings together 15-18 students from across the school district to work on a variety of projects to meet the learning goals of the program. This program is designed to provide students with the skills necessary to make a successful transition into the trades or dual credit program at VIU.

### **Projects Needed**

Our program is currently looking for real world experience to support class instruction. We are currently looking for projects such as:

- Small building projects (No larger than 100 sqft.)
- Small renovations
- Decking
- Siding
- Doors/Windows installation
- Fencing
- Concrete forms and placement

## **Project Considerations**

- 1 The start date must be flexible to meet the Program Schedule.
- 2 Materials are supplied and paid for by the project owner.
- 3 To be fair to the construction community a suggested donation will be required for the work that takes place. This donation will go to support program costs and transportation. Although the suggested donation amount may be less than commercial rate it is understood that the work taking place is being done by students and the work may take longer than if done by a general contractor. Student work will be supervised by a Red Seal tradesperson to ensure a quality product is provided.
- 4 Any work that requires a building permit will not be considered and should be awarded to a licensed contractor.

Please contact me with your project proposal if you would like a free estimate.
